Hole Location Gages (also referred to as Centerline Hole Location Plugs, or Flex Plugs) are used to measure the location of a tapped hole in a part, typically with a CMM. They are also used to determine centerline to centerline distances of threaded holes.

- Slotted at 90° increments to ensure positive location on the thread flanks, regardless of hole size (sizes over #10 or M5)
- Sizes #10 (M5) and smaller are solid with a front tapered thread section to cover the entire product tolerance (class 2B or 6H)
- The .2500" +/- .0001" (6.35mm +/- .0025mm) shank is concentric to the threaded section within .0002 T.I.R. prior to slotting
- For inspecting the location of a threaded hole in a part
- For determining centerline to centerline distances of threaded holes

NPSM–National Pipe Straight Mechanical–These external and internal threads are intended for free-fitting mechanical joints where there are no internal pressures. The product is gaged with straight Go and No Go plug and ring gages.

NPSL–National Pipe Straight Locknut–These external and internal threads are intended to produce a thread having the largest diameter that is possible to cut on standard pipe. The product is gaged with straight Go and No Go plug and ring gages.

NH–National Fire-Hose Coupling Threads–These external and internal threads are intended for fire hose, garden hose, chemical engine and booster hose. The product is gaged with straight Go and No Go plug and ring gages.

NPSH–National Hose Coupling Threads–These external and internal threads are intended for steam, air, water, and all other hose connections to be made up with standard pipe threads. The product is gaged with straight Go and No Go plug and ring gages.

NPSC–National Pipe Straight Coupling–These internal threads are intended to form low pressure tight joints when assembled with NPT external threads by using a sealer. The product may be gaged with a NPT plug gage or with straight Go and No Go plug gages.

NPSF–Dryseal American Standard Fuel–These internal threads are intended for use in soft or ductile materials for assembly with NPTF external threads without using a sealer. The product may be gaged with NPTF-LI basic notch plug gage or with straight Go and No Go plug gages.

NPSI–Dryseal American Standard Intermediate–These internal threads are intended for use in hard or brittle materials for assembly with PTF-SAE short external threads but may also be assembled with full length NPTF external threads. The product may be gaged with a NPTF-LI basic notch plug gage or with straight Go and No Go plug gages.

NOTE: NPSM and NPSF Series Gages are available from stock.
